

We can do inline code with `\lstinline[style=SOMESTYLE]!snippet!` where “!” are used to delimit the code snippet. Other delimiters are possible, such as `+` or `|`. The styles can be found in the file `anslistings.sty`

Blocks of code are written with

```
1 \begin{SOMESTYLE}
2 ...line of code
3 ...line of code
4 \end{SOMESTYLE}
```
